## Mathematical Methods for Engineers (MA 713) Problem Sheet - 8

## Composition of Linear Transformations and Matrix Multiplication

- 1. Label the following statements as true or false. In each part, *V*,*W*, and *Z* denote vector spaces with ordered (finite) bases  $\alpha$ ,  $\beta$ , and  $\gamma$ , respectively;  $T : V \rightarrow W$  and  $U : W \rightarrow Z$  denote linear transformations; and *A* and *B* denote matrices.
  - (a)  $[UT]^{\gamma}_{\alpha} = [T]^{\beta}_{\alpha}[U]^{\gamma}_{\beta}.$
  - (b)  $[T(v)]_{\beta} = [T]^{\beta}_{\alpha}[v]_{\alpha}$  for all  $v \in V$ .
  - (c)  $[U(w)]_{\beta} = [U]^{\beta}_{\alpha}[w]_{\beta}$  for all  $w \in W$ .
  - (d)  $[I_V]_{\alpha} = I$ .
  - (e)  $[T^2]^{\beta}_{\alpha} = ([T]^{\beta}_{\alpha})^2$ .
  - (f)  $A^2 = I$  implies that A = I or A = -I.
  - (g)  $T = L_A$  for some matrix A.
  - (h)  $A^2 = O$  implies that A = O, where O denotes the zero matrix.
  - (i)  $L_{A+B} = L_A + L_B$ .
  - (j) If *A* is square and  $A_{ij} = \delta_{ij}$  for all *i* and *j*, then A = I.
- 2. Let g(x) = 3 + x. Let  $T : P_2(\mathbb{R}) \to P_2(\mathbb{R})$  and  $U : P_2(\mathbb{R}) \to \mathbb{R}^3$  be the linear transformations respectively defined by

$$T(f(x)) = f'(x)g(x) + 2f(x)$$
 and  $U(a + bx + cx^2) = (a + b, c, a - b).$ 

Let  $\beta$  and  $\gamma$  be the standard ordered bases of  $P_2(\mathbb{R})$  and  $\mathbb{R}^3$ , respectively.

- (a) Compute  $[U]^{\gamma}_{\beta}, [T]_{\beta}$ , and  $[UT]^{\gamma}_{\beta}$  directly. Verify that  $[UT]^{\gamma}_{\beta} = [U]^{\gamma}_{\beta}[T]_{\beta}$ .
- (b) Let  $h(x) = 3 2x + x^2$ . Compute  $[h(x)]_{\beta}$  and  $[U(h(x))]_{\gamma}$ . Then use  $[U]_{\beta}^{\gamma}$  from (*a*) and Theorem 2.14 to verify your result.
- 3. Let

$$\alpha = \left\{ \left( \begin{array}{cc} 1 & 0 \\ 0 & 0 \end{array} \right), \left( \begin{array}{cc} 0 & 1 \\ 0 & 0 \end{array} \right), \left( \begin{array}{cc} 0 & 0 \\ 1 & 0 \end{array} \right), \left( \begin{array}{cc} 0 & 0 \\ 0 & 1 \end{array} \right) \right\},$$

$$\beta = \{1, x, x^2\},\$$

and

 $\gamma = \{1\}.$ 

Compute the following vectors:

(a) 
$$[T(A)]_{\alpha}$$
, where  $A = \begin{pmatrix} 1 & 4 \\ -1 & 6 \end{pmatrix}$  and  $T: M_{2 \times 2}(F) \to M_{2 \times 2}(F)$  defined by  $T(A) = A^t$ .

- (b)  $[T(f(x))]_{\alpha}$ , where  $f(x) = 4 6x + 3x^2$  and  $T : P_2(\mathbb{R}) \to M_{2 \times 2}(\mathbb{R})$  defined by  $T(f(x)) = \begin{pmatrix} f'(0) & 2f(1) \\ 0 & f''(3) \end{pmatrix}$ .
- (c)  $[T(A)]_{\gamma}$ , where  $A = \begin{pmatrix} 1 & 3 \\ 2 & 4 \end{pmatrix}$  and  $T : M_{2 \times 2}(F) \to F$  defined by T(A) = tr(A).
- (d)  $[T(f(x))]_{\gamma}$ , where  $f(x) = 6 x + 2x^2$  and  $T: P_2(\mathbb{R}) \to \mathbb{R}$  defined by T(f(x)) = f(2).
- 4. Find linear transformations  $U,T : F^2 \to F^2$  such that  $UT = T_0$  (the zero transformation) but  $TU \neq T_0$ . Use your answer to find matrices *A* and *B* such that AB = O but  $BA \neq O$ .
- 5. Let *A* be an  $n \times n$  matrix. Prove that *A* is a diagonal matrix if and only if  $A_{ij} = \delta_{ij}A_{ij}$  for all *i* and *j*.
- 6. Let *V* be a vector space, and let  $T : V \to V$  be linear. Prove that  $T^2 = T_0$  (the zero operator) if and only if  $R(T) \subseteq N(T)$ .
- 7. Let *V*, *W*, and *Z* be vector spaces, and let  $T : V \to W$  and  $U : W \to Z$  be linear.
  - (a) Prove that if *UT* is one-to-one, then *T* is one-to-one. Must *U* also be one-to-one?
  - (b) Prove that if *UT* is onto, then *U* is onto. Must *T* also be onto?
  - (c) Prove that if *U* and *T* are one-to-one and onto, then *UT* is also.
- 8. Let *A* and *B* be  $n \times n$  matrices. Prove that tr(AB) = tr(BA) and  $tr(A) = tr(A^{t})$ .
- 9. (a) Suppose that *z* is a (column) vector in  $F^p$ . Prove that *Bz* is a linear combination of the columns of *B*. In particular, if  $z = (a_1, a_2, ..., a_p)^t$ , then show that

$$Bz = \sum_{j=1}^{p} a_j v_j$$

- (b) Extend (a) to prove that column *j* of *AB* is a linear combination of the columns of *A* with the coefficients in the linear combination being the entries of column *j* of *B*.
- (c) For any row vector w ∈ F<sup>m</sup>, prove that wA is a linear combination of the rows of A with the coefficients in the linear combination being the coordinates of w.
  Hint: Use properties of the transpose operation applied to (a).
- (d) Prove the analogous result to (b) about rows: Row *i* of *AB* is a linear combination of the rows of *B* with the coefficients in the linear combination being the entries of row *i* of *A*.
- 10. Let *M* and *A* be matrices for which the product matrix *MA* is defined. If the *j*th column of *A* is a linear combination of a set of columns of *A*, prove that the *j*th column of *MA* is a linear combination of the corresponding columns of *MA* with the same corresponding coefficients.
- 11. Let *V* be a finite-dimensional vector space, and let  $T : V \rightarrow V$  be linear.
  - (a) If  $rank(T) = rank(T^2)$ , prove that  $R(T) \cap N(T) = \{0\}$ . Deduce that  $V = R(T) \oplus N(T)$ .
  - (b) Prove that  $V = R(T^k) \oplus N(T^k)$  for some positive integer *k*.
- 12. Let *V* be a vector space. Determine all linear transformations  $T : V \to V$  such that  $T = T^2$ . Hint: Note that x = T(x) + (x - T(x)) for every *x* in *V*, and show that  $V = \{y : T(y) = y\} \oplus N(T)$ .
- 13. Using only the definition of matrix multiplication, prove that multiplication of matrices is associative.

- 14. For an incidence matrix *A* with related matrix *B* defined by  $B_{ij} = 1$  if *i* is related to *j* and *j* is related to *i*, and  $B_{ij} = 0$  otherwise, prove that *i* belongs to a clique if and only if  $(B^3)_{ii} > 0$ .
- 15. Use the above exercise to determine the cliques in the relations corresponding to the following incidence matrices.

<i>(a)</i>	/0	1	0	1		/0	0	1	1
	1	0	0	0	(h)	1	0	0	1
	0	1	0	1	(b)	1	0	0	1
	$\backslash 1$	0	1	0/		$\backslash 1$	0	1	0/

- 16. Let *A* be an incidence matrix that is associated with a dominance relation. Prove that the matrix  $A + A^2$  has a row [column] in which each entry is positive except for the diagonal entry.
- 17. Prove that the matrix

$$A = \begin{pmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ 1 & 0 & 0 \end{pmatrix}$$

corresponds to a dominance relation. Use the above exercise to determine which persons dominate [are dominated by] each of the others within two stages.

18. Let *A* be an  $n \times n$  incidence matrix that corresponds to a dominance relation. Determine the number of nonzero entries of *A*.
